How We Meet Our Customers Needs

Overview & Benefits

The Redstone Technical Test Center has earned an international reputation as a "World Class" weapon component and subsystem "advanced test" and test support facility – a reputation gained by the testimonials of satisfied customers. There are several reasons for this excellent reputation.

First, the Center is committed to staying on the cutting edge of weapon system test and evaluation by continually enhancing and refining test facilities and methods and integrating modeling, simulation, and hardware-in-the-loop technology. The advanced test process reduces the cost of life-cycle testing at the system level, provides significantly more engineering insights into each system evaluated, and achieves both benefits in less time. It also significantly reduces the number of destructive tests required over the life of the product or weapon system.

Second, the Center's location on Redstone Arsenal in Huntsville, Alabama, provides numerous benefits important to our customers. Benefits include the synergy of collocation with Army science and technology, the convenience of colocated customers, and the ease of coordination between the R & D and T & E programs during development.

RTTC provides its customers convenient access to all data and resources such as expertise, facilities, and testing capabilities at the other DTC centers. The data collected at RTTC is in a format compatible with the other DTC test centers. This benefit provides our customers "one-stop-shopping" for their advanced testing and test support services.

Finally, it is our people--and the way they relate to our customers--that provide the Center the competitive edge that is frequently mentioned in customer exit interviews. Our customers value the knowledge base of our staff. They appreciate the flexibility of our personnel to respond quickly to their changing needs. And lastly, RTTC works very hard to provide good value for the test dollar.
